HER MOMENT OF COMPLETE JOY

When Grandmother Reads First Letter from Her Grandchild.

You may talk about great state papers, of presidents' messages, of royal exchanges of salutations, and all that sort of thing, but when you want to strike a chord that beats in harmony with the human heart, just see that grandmother reading that first letter from her grandchild. All time and space, and things created and uncreated, are concentered into the bliss of the moment, when the dear woman drinks in the meaning of those awkward, hesitating, incongruous lines, which with all their crudities, still seem stately and dignified under the emotion of a first great effort.

There is nothing like it. Shakespeare never matched it. Dante reads like an almanac by the side of it. It is a revelation that makes St. John's seem insipid and pale. The good woman reads it over and over, and thinks away back when she was a little girl, and when the child's mother was a little girl, and then of this little boy, just starting to open a path into the mystery of life; and she reads another passage of the sweet, blundering letter, which closes with the very formality of affection—"Your loving friend"—and then her thoughts rush out of the window into the gray skies, but after a while they come back, bringing her the assurance from somewhere, that of all the blessings of life, one of the sweetest has come to her—that of getting the first epistle from her first grandchild.—Columbus (O.) State Journal.

Eve Was a Lunker.

Man still carries the original number of ribs, but he is short of a lung lobe. Where did he lose it? Eve got it. Man's right lung to-day consists of three lobes; man's left lung to-day consists of two lobes. Let us consider the missing lobe on the left. The lungs, mind you, are the life. Eve was made out of Adam's third lung lobe on the left, the lobe nearest the heart. She was constructed out of wind mostly. That is—she took part of Adam's breath away. Adam's posterity of the male persuasion in these latter days can count on only five lobes to both lungs; while Eve's daughters can count on seven; which accounts for woman having the last word in a controversy.—New York Press.
